

Izaiah Harrison

My name is Izaiah and I am a recent graduate of the University of South Carolina-Upstate where I studied Computer science and technologies. I also studied other programming languages during my time at Greenville Tech. I am applying for Software Engineering and web developing roles so that I may find a job that is well suited for me.

EXPERIENCE

I learned the basics of programming from Greenville Tech and USC Upstate. There was a hard time where I needed to ask the professor to help me through the code I didn't quite understand. I even ask a fellow classmate to help me out with the programming I am having trouble with.

I never had job experience but I would apply to apprenticeship and internship programs. Once I completed the apprenticeship program, I would be acceptable to any job I would find.

EDUCATION

Greenville Tech, South Carolina — *Dean degree of computer science*

May 2020 - July 2022

It is the first college building I have attended. It is also a place where I have focused on web developing courses and learning other programming languages.

University of South Carolina Upstate, Spartanburg, — Bachelor degree of computer science

August 2022 - May 2025

The USC Upstate was the next step in learning more about learning programming. I usually get in trouble focusing on the other courses but the rest is fine. After 3 years, I graduated from University and earned my diploma.

Build Carolina, South Carolina — *Certificate degree*

MONTH 2025 - MONTH 2026

I once visited Build Carolina years ago. That's what brought me to the web developing career journey. The Build Carolina coding school is where I was introduced to HTML, CSS, and JavaScript.

PROJECTS

Dungeon game — *Python(Pycharm)*

This is the first program gaming I have created with Python. I downloaded an add-on for the game like Pycharm. I followed the tutorials of how to code it and I had a great time. Although it is still a work in progress.

8-ball — *Python (with react)*

I made the 8-ball assignment as a demonstration of JavaScript before remodeling it with React JSX. I believe that using react software made the

SKILLS

- Coding:
 - HTML
 - CSS
 - Python
 - React
 - FastAPI
- Organization: I can turn any complex codes into small things to manage the project better. Working on smaller files instead of a huge one is the easiest solution for me. I learned that from a lot of professors.
- Designing: I could come up with the design of the website I am working on. I merely work on the functionalities for the inputs and results for progress. After the functionalities I have completed, I may work on improving the design.
- Problem-solving: I can form a solution to the problem step-by-step. For example, when I encounter an error, I pause my progress to figure it out. I tested it out with a few attempts, until the solution was successful.
- Project managing: I am capable of interacting with group members about brainstorming the project.

website a lot better than the original code.

Airline — *Python (with react)*

The airline website was created with JavaScript and remade with React JSX. For this project, it uses the filter of what kind of Airline and displays the result in a table style.

My store — *Python (with react and supabase)*

My own project that I came up with. It features a store where you could buy anything you'd want with a low price. The project is made to showcase my skills for the career I wanted.

AWARDS

USC Upstate Diploma

Dean Certificate from
Greenville Tech

Certificate from Build
Carolina
